

How To Use Audio Mixers

What's a Mixer

Audio mixers are a means to control different groups of sound. This asset comes with two audio mixers, an SFX mixer and a Music mixer. Each mixer is connected to Volume Slider in the settings panel provided in this package. This lets you control the volume of all sound effects or music in your game (assuming you've connected each sound to a mixer).

How to connect my audio to a mixer.

To connect a mixer to your music or sound effect, simply go to the audio source of your sound, select output, and select the mixer of your choice. If you have a sound effect then select SFX mixer. If you have music, select Music mixer. Do this with all of your Audio Sources in each game scene, and you'll have a high quality sound control system!
